

ERIC MARTIN

Senior AI Systems Architect | AI Agents, Automation & Business Systems Integration

Newton, KS | (316) 214-9102 | eric@atlas-beren-systems.com | eric-portfolio-five.vercel.app

PROFILE

AI systems builder and operations leader specializing in translating business constraints into integrated software, automation, and AI-assisted workflows. Architected a multi-tenant operations platform connecting CRM, estimating, project delivery, financial visibility, and field operations. Background includes enterprise business development, national service delivery, workflow design, and operational scaling.

TECHNICAL CAPABILITIES

AI systems: Agent execution architecture, LLM/API integration, tool orchestration, permission-aware retrieval, human-in-the-loop approvals, AI-assisted document analysis, run persistence, auditability.

Engineering: TypeScript, JavaScript, Next.js, React, SQL, PostgreSQL, HTML/CSS, REST-style APIs, Git.

Platforms and tools: Supabase (Auth/RLS/Postgres), Vercel, n8n, MCP integrations, Cursor; familiarity with Trigger.dev and Inngest workflow patterns.

Delivery: Requirements discovery, workflow mapping, debugging, process instrumentation, SOPs, user enablement, cross-functional implementation.

EXPERIENCE

ATLAS-BEREN SYSTEMS | Chief Systems Architect | 2026–Present

- Architected and developed Atlas-Beren Console, a multi-tenant business operations platform using Next.js, React, TypeScript, Supabase, and PostgreSQL.
- Connected CRM, prospect discovery, estimates, projects, finance, inventory, scheduling, and field operations into coordinated operational workflows.
- Built an AI workspace assistant designed around tenant-aware permissions, business-context answers with linked sources, private conversation history, and usage controls.
- Developed an agent execution framework with an agent catalog, readiness checks, executor registration, persisted runs, scheduled execution, and human approval queues.
- Implemented AI-assisted bid-document review and estimating workflows with cited findings, quantity extraction, and review checkpoints; designed for accountable human decision-making.
- Developed integrations and automations bridging structured business data, provider APIs, file imports, and operational actions.

KANSAS ELECTRIC | Business Development Manager | 2024-2025

- Developed approximately \$100M in prospective project opportunities and helped close roughly \$2M in business during the first ~60 days.
- Identified estimating capacity as a constraint on bid participation; built an AI-assisted application for uploading plans and accelerating takeoff/estimating work.
- For targeted estimating workflows, reported reducing work that had taken approximately 20 hours to roughly 10–15 minutes, enabling faster opportunity assessment.
- Built digital tools and marketing infrastructure to improve commercial workflows and visibility.

VALE FIELD SERVICES | Head of Strategic Operations / Operations Manager | 2019-2024

- Helped scale a national field-services operation from inception to approximately \$3.5M–\$4M in annual recurring revenue.
- Directed distributed technician teams and field managers supporting multi-site enterprise clients across retail and food service.

- Built operational processes for sales, onboarding, project delivery, vendor coordination, quality assurance, training, and customer renewals.
- Coordinated high-volume technology deployment and POS retrofit programs, translating complex field constraints into repeatable execution systems.

ADDITIONAL RELEVANT WORK

LeakLens — SaaS product prototype: Created a Next.js/TypeScript revenue-leak recovery demo with simulated typed API routes, in-memory data, dashboard/triage/recovery workflows, React Query, Zod, and Playwright smoke tests. Prototype, not a live recovery backend.

Earlier: Construction Project Manager, Quality Solutions Inc.; Communications Training Officer, Sedgwick County 911 (trained emergency call-taking, simultaneous dispatch, and pursuit procedures).
